This page contains the full text of the document, which is a presentation about the Ruđer Bošković Institute (RBI) and its repository, FULIR. The presentation discusses the repository's role in institutional archiving and its importance in the Croatian academic community. It highlights the repository's function in collecting, archiving, and making publicly accessible scientific output.

The presentation covers the repository's development phases, plans for the future, and its integration with other scholarly initiatives. It emphasizes the repository's role in promoting scientific communication and archiving.

Key points:
- **Plans for the future**: Interoperability with CROSBI database, education for RBI staff, promotion of Open Access and self-archiving.

The presentation also highlights the repository's support for OA initiatives and its alignment with international standards and practices, such as OpenDOAR and Sherpa/RoMEO.

The repository's homepage is shown, along with an example of a record view. The repository provides access to a variety of digital content, including scientific articles, conference proceedings, and other materials.

**Supports OAI 2.0**: The repository supports OAI 2.0, allowing for the exchange of metadata, which is crucial for interoperability and visibility in the academic community.

**Collections and Impact**: The repository has been indexed in ROAR (Registry of Open Access Repositories) and EDUHR (Directory of Open Access Repositories), indicating its recognition and accessibility within the academic landscape.

**Copyright and Access**: The presentation stresses the importance of copyright and access, emphasizing the repository's role in ensuring the legal and ethical distribution of scholarly works.
