ABOUT CroRIS

Croatian Research Information System (CroRIS) is a national level CRIS system in Croatia. The goal of CroRIS is to provide comprehensive, complete and accurate data on Croatian research activities. CroRIS plays a crucial role in managing and analysing research-related data, benefiting users on both national and international levels.

METADATA

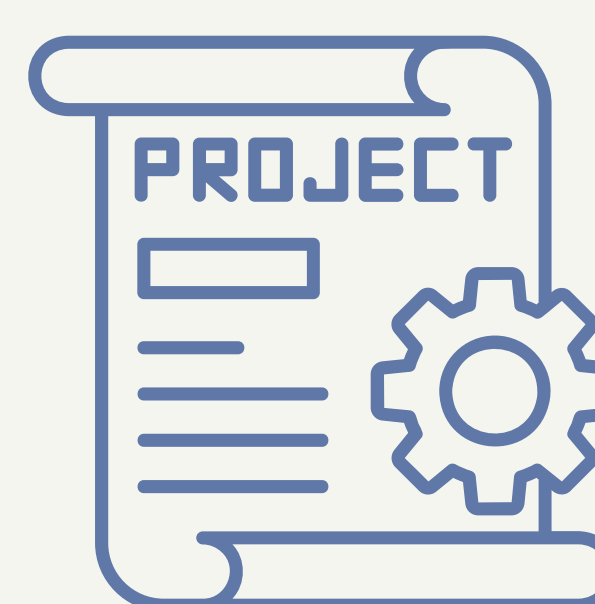

The system is based on the CERIF data model that enables interoperability with other information systems. The incorporation of the detailed metadata description tailored for Google Scholar and compliance with Open Archives Initiative Protocol for Metadata Harvesting (OAI-PMH) enables better visibility of CroRIS. The metadata can also be accessed through application programming interface (API).

INTEROPERABILITY WITHIN THE SYSTEM

System modules are interoperable and interconnected, enabling data use for various purposes. This was constructed as such so as to ensure the minimization of data duplication and maximization of the usability.

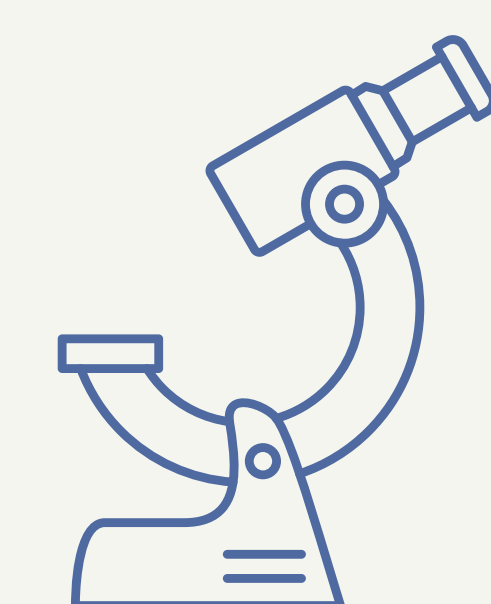

CROSB

Projects

Persons

Equipment and Services

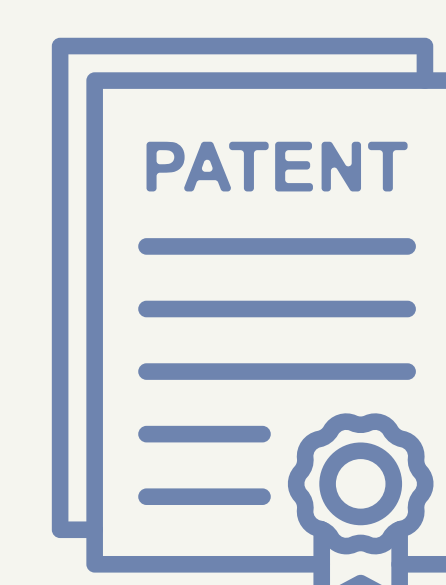

Official registers of the Ministry of Science, Education and Youth

Organisational Units

Journals

Patents and Products

Events

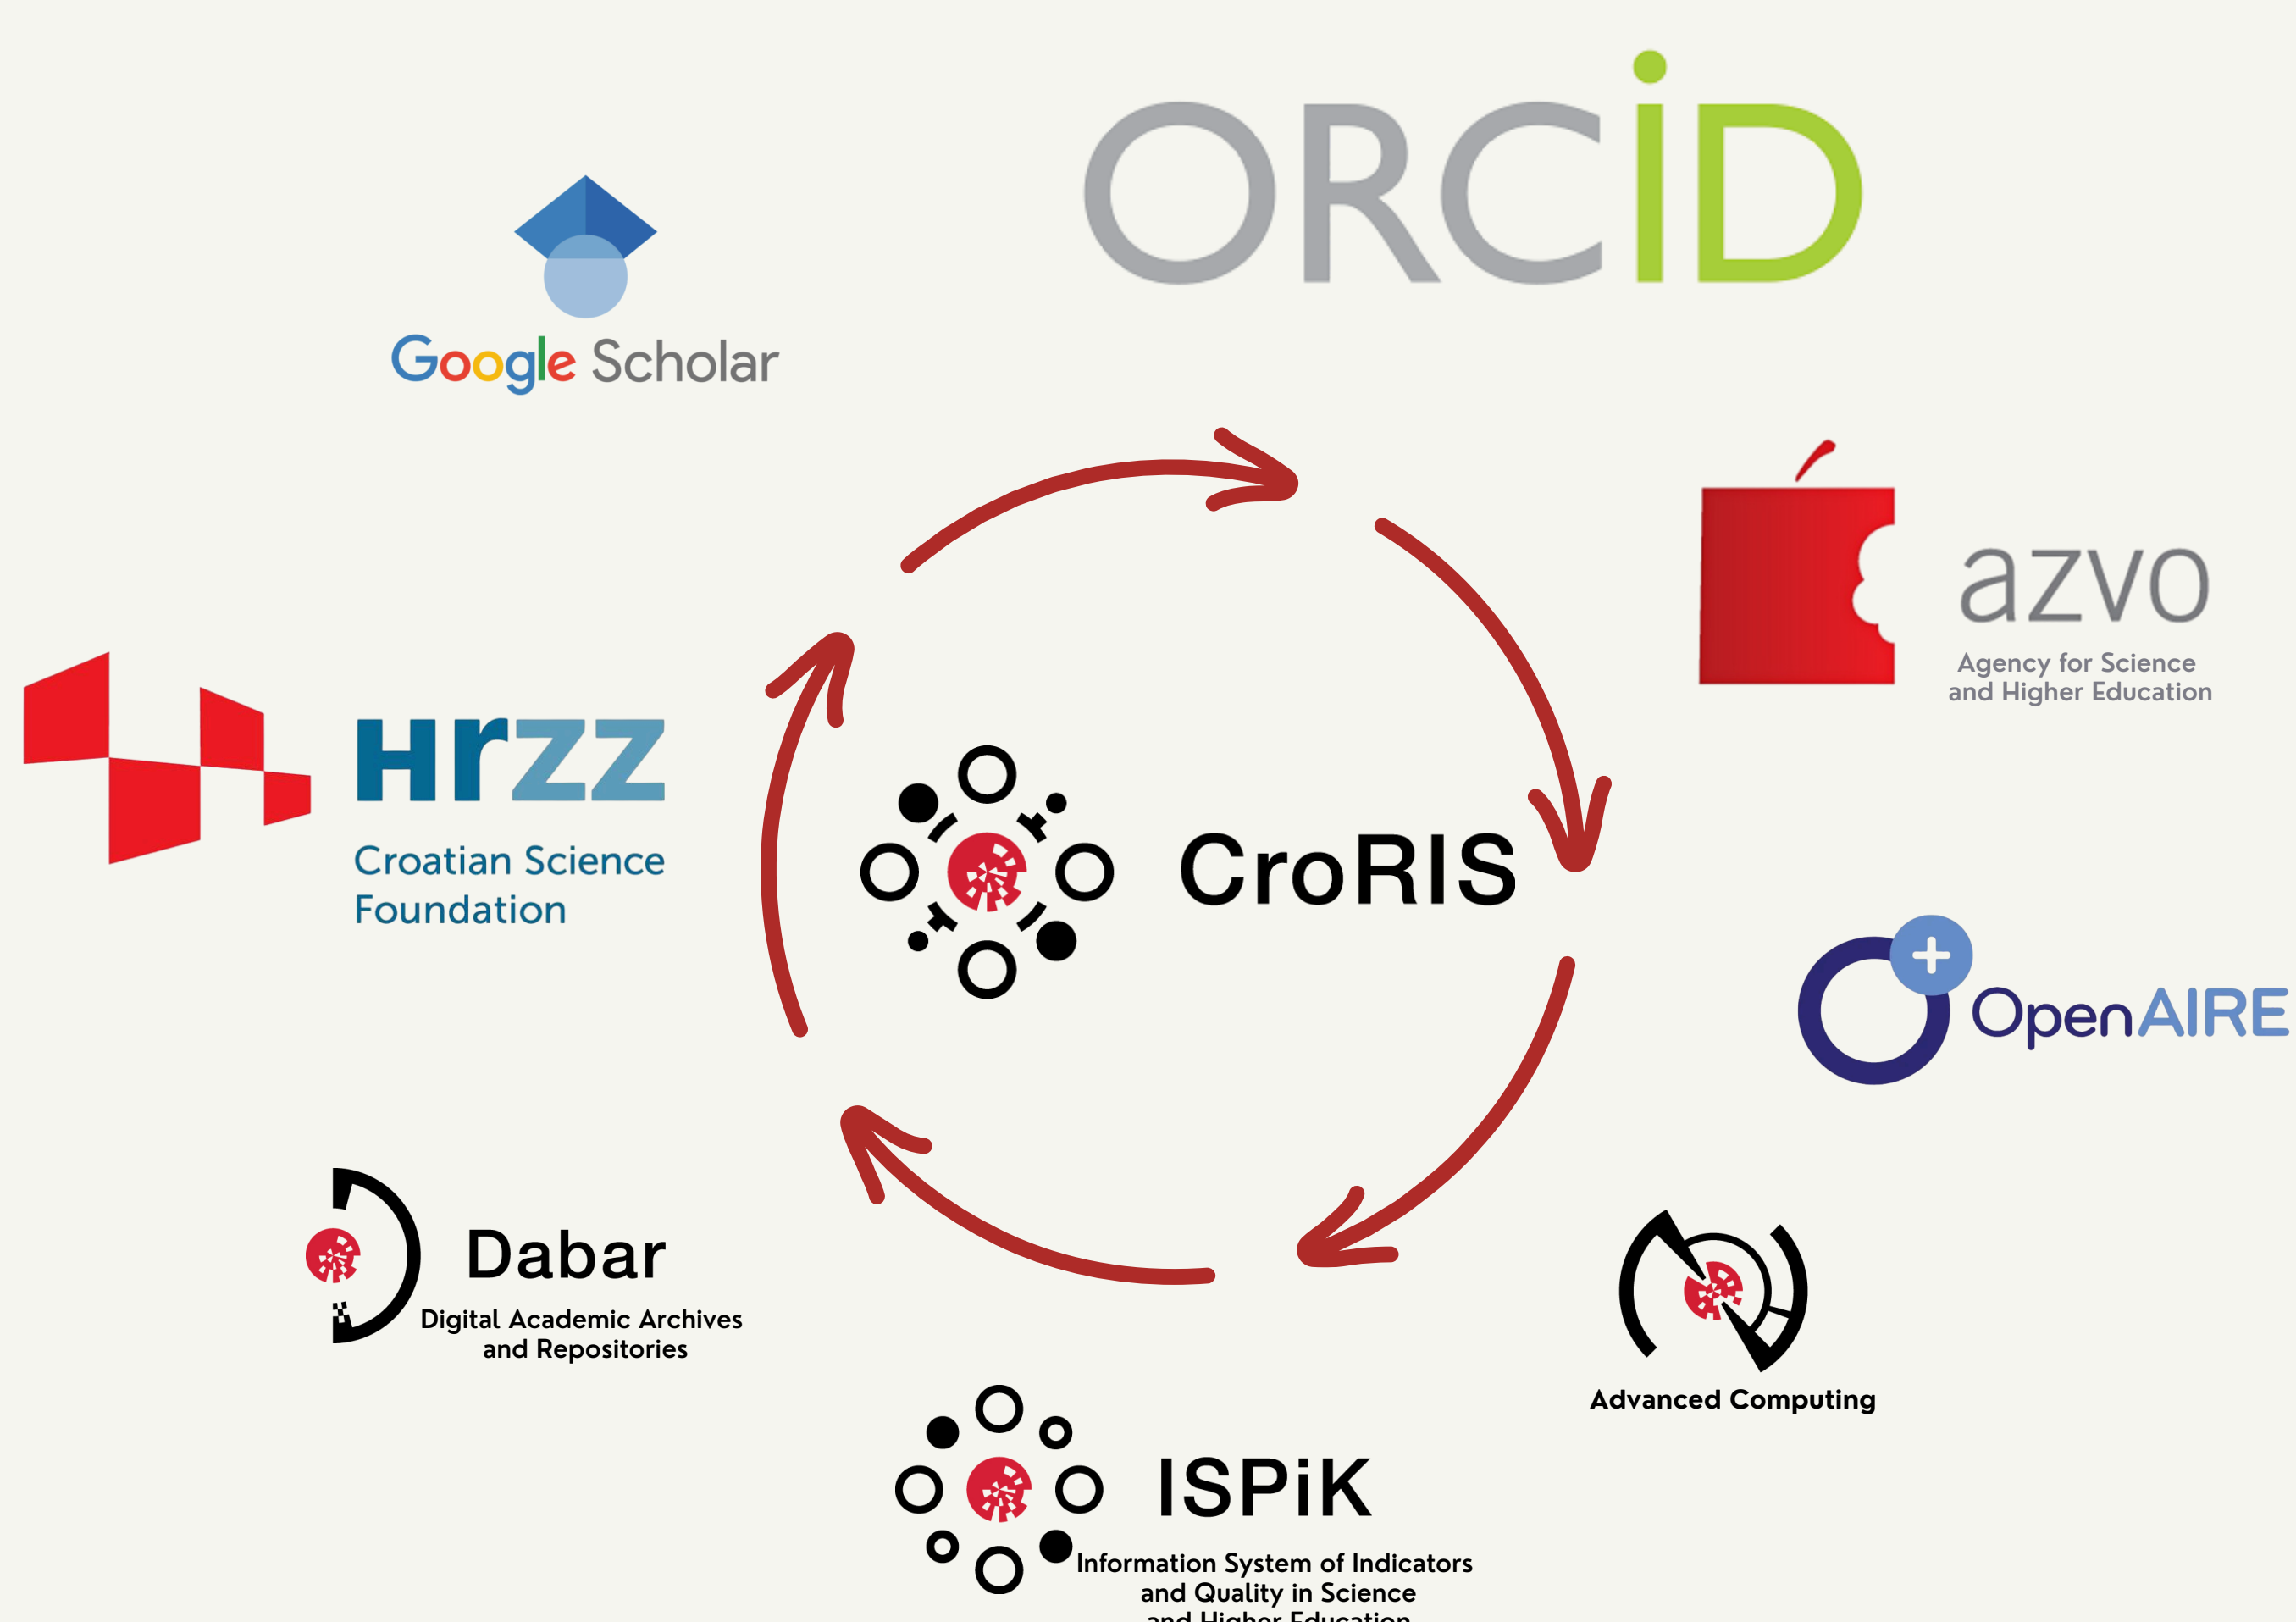

CroRIS REPORTS

The data can be analyzed and used for different purposes. CroRIS enables the users with proper authorisation to generate reports for career advancement, institutional reports for the re-accreditation process, as well as reports for authorities such as the Ministry of Science, Education and Youth.

CONNECTION WITH OTHER SYSTEMS

CRORIS AND OPEN SCIENCE

OPEN ACCESS

CroRIS:

- tracks open-access publications and APCs
- aligns with EOSC (European Open Science Cloud)
- promotes transparency, visibility and collaboration
- most data is openly accessible, except GDPR-protected fields
